

Business Profile

CONNECTED ENTERPRISE SOFTWARE

One modular ERP for finance, people, operations, industry workflows and enterprise governance.

Huphi ERP brings core business functions into one connected operating environment. Organisations can start with a focused module or adopt the complete ERP, while maintaining shared enterprise context across transactions, approvals, access, reporting and audit evidence.

28 ERP modules

R800 / month

1 connected platform

Company overview

Huphi is focused on building a connected modular ERP around the operating needs of modern organisations. The platform is structured across finance and accounting, people and workforce, operations, specialist industry solutions, and admin and governance.

What Huphi is designed to solve

Disconnected business systems

Replace fragmented tools and isolated spreadsheets with connected modules sharing enterprise context.

Limited operational visibility

Bring registers, dashboards, transaction status and control evidence closer to the people responsible for action.

Weak process control

Support permission-aware access, approvals, workflow, company context and traceable activity.

Difficult modular growth

Allow an organisation to start with a specific need and expand across the same ERP environment.

Platform model

Capture	Control	Connect	See
Record the business event once.	Apply permissions, approvals and operating rules.	Move relevant information across modules.	Use registers, dashboards, reconciliation and audit evidence.

Huphi ERP product families

Finance & Accounting

Accounting, payments, cash, assets, tax, budgets, reconciliation and group reporting.

[Core Accounting](#), [Accounts Payable](#), [Accounts Receivable](#), [Treasury & Cash](#), [Tax](#), [Fixed Assets](#), [Budgeting & Control](#), [Group Consolidation](#)

Governance	Audit & Testing	Module evidence; UI/API/database checks; readiness findings
Governance	Workflow Management	Approval routing; decisions; status; escalation
Governance	Integrations	Connectivity; controlled data exchange; monitoring
Governance	Tenants & Company Control	Company context; isolation; configuration; organisational access

Commercial model

Current Huphi launch pricing is intentionally simple and supports both modular adoption and complete ERP access.

Option	Price	What it means
Any single ERP module	R800 / month	Deploy one selected Huphi ERP module.
Full Huphi ERP	R800 / month	Access the complete Huphi ERP module suite under the current launch pricing.

Implementation scope, integrations and customer-specific work can be discussed separately where required.

Specialist industry modules

Legal Practice

Legal operations can use purpose-built client, matter, case, document and deadline workflows while retaining access to the wider Huphi ERP for finance, HR, tax, treasury and governance.

Medical Practice

Medical practices can use patient, appointment, billing and operational workflows while accessing the wider ERP for finance, workforce management, treasury, tax and enterprise controls.

SimbaPDF

SimbaPDF remains Huphi's separate document and PDF management product. It is presented separately from the ERP catalogue so the Huphi website stays focused on enterprise software while still giving customers a clear route to document tooling.

Enterprise control direction

Controlled access

Permission-aware and module-aware access patterns help keep enterprise functions aligned to user responsibilities.

Company context

Shared company and enterprise context supports cleaner separation and more consistent operation across modules.

Workflow & approvals

Business decisions can be routed through controlled workflow rather than informal hand-offs.

Auditability

Registers, history and audit evidence support traceability of business activity and testing readiness.

Connected data

Finance, people, operations and specialist modules are designed to operate in one broader enterprise environment.

Why the Huphi model is different

- A broad ERP scope without requiring every customer to start with every module.
- Industry modules that can use the same finance, HR, treasury, tax and governance environment.
- A commercial entry point designed to make enterprise capability accessible to growing organisations.
- A platform direction centred on real business transactions, controls, registers and operational evidence.

Talk to Huphi

Discuss your ERP requirements, a module walkthrough, specialist Legal or Medical workflows, or the current launch pricing.
